

Java Assignment 1c – Variables C

Create a new Java project with a class called **ThreeLittleNumbers**

Object:

Create three appropriate variables that will store simple numbers.

Assign a random number between 1 and 10 to each of the variables.

Print the sum of the variables (if you added them all up) on the screen.

Print the product of the variables (if you times them all together) on the screen.

Upload the completed java code to Edmodo when done (in either .txt or .docx format)

Example output:

Number 1: 7

Number 2: 3

Number 3: 5

Total: 15

Product: 105
