

## Java Assignment 5h – Which one is longer?

Create a new Java project with a class called WordCompare

*Object:*

You must create a program that asks the user for one word and then a second word.

The program then has to tell the user which word is longer.

If they are both the same length, your program has to tell the user that too.

Hint: you will have to use the **.length()** method

Upload the completed java code to Edmodo when done (in either .txt /.docx/.odt format)

*Example output 1:*

**Enter word #1 > Amazing**

**Enter word #2 > Programmer**

**Word #2 (Programmer) is the longest**

*Example output 2:*

**Enter word #1 > Awesome**

**Enter word #2 > Dude**

**Word #1 (Awesome) is the longest**

*Example output 3:*

**Enter word #1 > Java**

**Enter word #2 > Cool**

**Both words are equal in length**
