

Java Assignment 5b – SimpleCalc1

Create a new Java project with a class called SimpleCalc1

Object:

You must create a program that does simple calculations.

The program should ask for the user for 2 numbers.

It should then give the user a choice to “1 – Add the numbers” or “2 – Multiply the numbers”

The computer must then respond with the user’s choice of answer.

Make sure that your output matches the examples below EXACTLY!

Extension:

Add another 2 options: “3 – Square the number” or “4 – Subtract Number 2 from Number 1”

Upload the completed java code to Edmodo when done (in either .txt /.docx/.odt format)

Example output 1:

```
Enter 1st number > 8
Enter 2nd number > 10
What would you like me to do?
Press 1 and <enter> to ADD the numbers
Press 2 and <enter> to MULTIPLY the numbers
What is your choice? > 1
The numbers added together are: 18
```

Example output 2:

```
Enter 1st number > 6
Enter 2nd number > 5
What would you like me to do?
Press 1 and <enter> to ADD the numbers
Press 2 and <enter> to MULTIPLY the numbers
What is your choice? > 2
The numbers multiplied together are: 30
```
