Java Assignment 2c – InitialHere

Create a new Java project with a class called **InitialHere**.

Object:

Have the program ask for the user's name and then surname.

(Store the answers in separate variables)

Then have the computer display the person's initials (first letter of name and first letter of surname)

Hint: *you will have to the .charAt(0) method*

Upload the completed java code to Edmodo when done (in either .txt or .docx format)

Example output 1:

What is your name?
Bob
What is your surname?
Smith
Your initials are BS

Example output 2:

What is your name?
Gavin
What is your surname?
Aujula
Your initials are GA
