Java Assignment 4a – TempCheck (IF)

Create a new Java project with a class called **TempCheck**

Object:

Have the user enter a temperature number for evaluation. If the number is smaller than 0, the computer must respond with the following line: "That's freezing!"

Upload the completed java code to Edmodo when done (in either .txt or .docx format)

Example 1:

```
Enter a temperature > 0

|| no output ||
```

Example 2:

```
Enter a temperature > -10

THAT'S FREEZING!
```
