Java Assignment 5f – LetterCheck

Create a new Java project with a class called **LetterCheck**

Object:

You must create a program that asks the user for their first name.

The program then has to tell the user if their name starts with a vowel (A, E, I, O, U) or a consonant (all the other letters of the alphabet).

Hint: you will have to use the .charAt(x) method

Upload the completed java code to Edmodo when done (in either .txt /.docx/.odt format)

Example output 1:

```
Please tell me your name > Amanda
Your name starts with a vowel (A).
```

Example output 2:

```
Please tell me your name > Simranjeet
Your name starts with a consonant (S).
```
