Java Assignment 6a – RandomPINGenerator?

Create a new Java project with a class called **RandPinGen**

Object:

You work for a bank that must generate random PIN codes for their customers' bank cards.

When the program runs, it must generate a new 4 digit PIN code for a customer.
There is no input, only output, in this program.

Hint: you will have to use the **Math.random()** method

Upload the completed java code to Edmodo when done (in either .txt /.docx/.odt format)

Example output 1:

```
Generating random PIN code...

PIN code: 3276
```

Example output 2:

```
Generating random PIN code...

PIN code: 1187
```

Example output 3:

```
Generating random PIN code...

PIN code: 9042
```
